Figure 1: Revision History

1 Executive Summary of Testing

The testing completed on February 17th, 2018 has yielded 44 passes, 10 failures, and 3 pending. Pending tests have not been executed due to lack of relevance at this stage. The failures in their entirety can be attributed to features that are in progress or that have not yet been implemented including; automated roll and pitch as well as the machine learning model. Given that the failure rate is roughly 17%, the team does not recommend operation of the project at this time.

An important note to consider is that most errors are localized in the Shooting Mechanism and ShotRecommender subsystems. The team would also like to expand testing further to have higher coverage of the system and increase their confidence in its reliability.

The team will continue developing the system until March 9th where tests will be redefined and added to satisfy the team's ideals. After which, the second round of testing will commence.

2 Introduction

2.1 Project Overview

SmartServe is an autonomous table tennis training system for table tennis players with various skill levels. SmartServe aids in diagnosing and improving a player's performance over time. The system trains table tennis players by shooting table tennis balls towards the player and detects successful returns from the player. The system can further adapt to the player's weaknesses and help them overcome it through further training. Importantly, SmartServe alleviates the problems of finding and working with a coach for players, as well as coaches trying to train multiple players simultaneously. The system will be deemed a success if the table tennis players and coaches can enjoy and see some value added by using SmartServe.

The project started at the beginning of the Fall 2017 academic term and will conclude at the end of the Winter 2018 term. In addition, the core project team consists of final year Software and Mechatronics Engineering students who are enrolled in the MECHTRON 4TB6/SFWRENG 4G06 capstone project course.

2.2 Document Overview

This document will provide details of all formal testing methods and results performed on the SmartServe system. The first part of testing includes detailing how it will be performed and the details of the system on which it is run. This matters due to details which can affect the testing outcomes like operating system, lighting or performance of hardware. The schedule for the test will also be detailed alongside the major deliverables to have clear outcomes to explain to stakeholders. The testing will be preformed off of the *master* branch as it stands during the beginning of the testing phase.

The actual testing will then be detailed as test cases based on what subsystem they are testing. As needed, the communication will be tested in between the subsystems to ensure communication is working as intended. Lastly, a test case-requirement matrix will be provided which maps what test cases test which requirement. This will give the reader a simple way to check if a requirement is fully satisfied.

2.3 Naming Conventions and Terminology

The following terms and definitions will be used throughout this document:

- ACID: a database transaction which is atomic, consistent, isolated and durable
- CV: computer vision
- **FPS**: frames per second
- FSM: finite state machine, shows transitions between states
- GUI: graphical user interface
- **IPO**: input process output
- **Pitch**: rotation along the y-axis; this rotation angle primarily dictates the range of the ball from the net to the edge of the table on the user side
- Roll: rotation along the x-axis
- Shooting Mechanism: refers to the part of the system that shoots the table tennis balls towards the user side (player) Please refer to Figure ?? for visual illustration
- System: encompasses both the hardware and software parts of SmartServe
- **System Side**: the side of the table where the electromechanical system is placed; it is the opposite side of the User Side Please refer to Figure ?? for visual illustration
- TCP: transmission control protocol
- Team: all team members of the core capstone project, as noted in the list of Authors
- User Side: the side of the table where the user (player) is standing
- Yaw: rotation along the z-axis; this rotation angle primarily dictates the panning functionality of the shooting mechanism from the right side to the left side of the table

3 Testing Philosophy

3.1 Approach

The approach to testing will be to separate the subsystems as much as possible and test them accordingly. Every subsystem will be unit tested in JUnit or PyUnit if implemented in Java or Python respectively. The shooting mechanism will be tested manually to ensure it is functional properly. Stubbing a service or dependancy can be done to return consistent, reliable and predictable results. For instance, the SmartServe system may use a stub for the CV subsystem to return a predefined sequence of pass/fail flags.

When preforming the tests, every test will be run three times unless specified otherwise. The test must be satisfied for 2 or 3 of the attempts to be determined successful.

3.2 Schedule

Task	Date	Notes
Complete Test Cases	February 13, 2018	N/A
Run Tests (First)	February 16, 2018	N/A
Edit Test Cases	March 9, 2018	N/A
Run Tests (Second)	March 16, 2018	N/A

Table 1: Testing Schedule

3.3 Environment

The SmartServe system uses heavy computation power due to the CV and ML models, so the system which runs the test will have the following details. The system will be a 15-inch Macbook Pro (Late 2016) running macOS High Sierra (10.13). The Macbook Pro has an 2.6 GHz Intel Core i7 CPU and a Radeon Pro 450 2GB GPU. The location will be in Thode Makerspace where the CV will be adjusted as necessary for those lighting conditions.

3.4 Code Reviews

As per the Development Plan document, the team will be using branches on GitHub to control additions into the source code. The list of Pull Requests can be found here here. Although it is impossible to test whether it is better that they were made as opposed to all members contributing to the same branch, few commits have had to be made directly to the develop branch, and 0 to the master branch, which indicates the system is working as expected.

3.5 Setup Instructions

The following items should be preformed in succession to set up the system for testing.

- Data Storage: delete the *smartserve* database if it exists, and dump the only SQL file in src/Database into a new *smartserve* database
- Arduino: add the .cpp and .h files for AutomaticPanning, AutomaticRoll, Pitch and FeedAndShoot, then load the FeedPitchAndShoot sketch onto the top Arduino, and PanAndRoll sketch onto the bottom Arduino
- ComputerVision: connect the webcam over USB, and run src/ComputerVision/cv.py using Python 3.6
- ShotRecommender: run the src/ShotRecommender/shotRecommender.py using Python 3.6
- SmartServe: replace the port strings in the Controller.java with the associated ports using the Arduino desktop application for both ardunios

4 Test Cases

4.1 Electromechanical Subsystems

4.1.1 Shooting Mechanism

Test ID: SMC1	Feeding Mechanis	sm Rotation Test	Status: PASS		
Description: The fee	ding mechanism rotates	by given amount in degrees.			
/	Pass/Fail Condition: The feeding mechanism rotates by given amount of degrees within a tolerance of 2 degrees.				
Pre-Conditions: The	Pre-Conditions: The feeding mechanism is ready/powered on.				
Input: Integer indica	Input: Integer indicating the amount of degrees to be rotated.				
Expected Results: 1 tates to the required	Feeding mechanism roposition.	Actual Results: One ball is s	hot at a time		
Post-Conditions: N/	A				

Table 2: Feeding Mechanism Rotation Test

Test ID: SMC2 Shooting C	ontrol Test	Status: PASS			
Description: The shooting control shoots the power level to achieve the desired speed.	Description: The shooting control shoots the ball using a rotating wheel at the requested power level to achieve the desired speed.				
Pass/Fail Condition: The system must reach amount of power, within 0.1 metres of error.	Pass/Fail Condition: The system must reach the same distance each time for the same amount of power, within 0.1 metres of error.				
Pre-Conditions: The Shooting Control motor	Pre-Conditions: The Shooting Control motor is powered on, and connected to the system.				
Input: Integer between 0-100 indicating the power level of the shot.					
Expected Results: 2 successive shots land in	Actual Results: 2 successiv	e shots land			
the same spot	in the same spot				
Post-Conditions: N/A					

Table 3: Shooting Control Test

Test ID: SMC3	Four Position	on Roll Test	Status: FAIL		
Description: The system rot	Description: The system rotates the Shooting Control to one of the four default positions.				
Pass/Fail Condition: Rotate	Pass/Fail Condition: Rotates to the indicated position.				
Pre-Conditions: The Shooting Control motor is powered on, and connected to the system.					
Input: Integer between 0-3 indicating the desired default position.					
Expected Results: The shoot tates to the requested defau	O	Actual Results: Not im	plemented		
Post-Conditions: N/A					

Table 4: Four Position Roll Test

Test ID: SMC4	Adjustable Pito	ch Control Test	Status: FAIL		
Description: The pitch of	Description: The pitch control angles the shooting mechanism at the desired pitch level.				
Pass/Fail Condition: Ro	Pass/Fail Condition: Rotate to the desired pitch level with a tolerance of 5 degrees.				
Pre-Conditions: N/A	Pre-Conditions: N/A				
Input: Integer between	Input: Integer between -15 deg to 45 deg indicating pitch angle.				
Expected Results: Roperted pitch level with a tolerary		Actual Results: Not impleme	ented		
Post-Conditions: N/A					

Table 5: Adjustable Pitch Control Test

Test ID: SMC5 Panning Shooting Mech	anism Across the Table Status: PASS			
Description: Move the system to face the direction specified in degrees.				
Pass/Fail Condition: System moved to desired position.				
Pre-Conditions: Panning stage is homed correctly before moving to the first location.				
Input: Integer between 60 deg to 120 deg indicating where to point the shooter.				
Expected Results: Moves to the desired po- Actual Results: Moves to desired posi-				
sition without going out of bounds.	tions			
Post-Conditions: When powered down, the system rotates to the home (0 degrees) position.				

Table 6: Panning Shooting Mechanism Test

Test ID: SMC6	Shut Off Power	er Switch Test	Status: PENDING		
Description: Switch on situation	the machine cuts p	ower to the system in	n case of an emergent		
Pass/Fail Condition: Sy	Pass/Fail Condition: Systems shuts off when flicking the switch				
Pre-Conditions: Machine must be on					
Input: N/A					
Expected Results: Power switch is used	er shuts off when the	Actual Results: N/A	L		
Post-Conditions: System	n is off				

Table 7: Shut Off Power Switch Test

4.2 Software Subsystems

4.2.1 Computer Vision

Test ID: CV1	Ball Detec	ction Test	Status: PASS		
Description: Tests if CV subsys	tem can detec	et a table tennis ball			
Pass/Fail Condition: N/A	Pass/Fail Condition: N/A				
Pre-Conditions: CV subsystem successfully connects to camera					
Input: Ball is placed in frame					
Expected Results: CV subsystem detects Actual Results: As expected ball					
Post-Conditions: N/A					

Table 8: Ball Detection Test

Test ID: CV2	Ball Upward I	Detection Test	Status: PASS
Description: Tests if CV	V Subsystem can dete	ct upward motion of the ball	
Pass/Fail Condition: N/A			
Pre-Conditions: CV Subsystem successfully connects to camera, ball is being detected			
Input: Ball is lifted upwards			
Expected Results: CV to	racks the ball in mo-	Actual Results: As expected	l
Post-Conditions: N/A			

Table 9: Ball Upward Detection Test

Test ID: CV3	Ball Downward	Detection Test	Status: PASS	
Description: Tests if CV	Subsystem can dete	ct downward motion of the	e ball	
Pass/Fail Condition: N/A				
Pre-Conditions: CV Subsystem successfully connects to camera, ball is being detected				
Input: Ball is moved downward				
Expected Results: CV tr tion	acks the ball in mo-	Actual Results: As expec	cted	
Post-Conditions: N/A				

Table 10: Ball Downward Detection Test

Test ID: CV4	Ball Rightward	Detection Test	Status: PASS	
Description: Tests if	Description: Tests if CV Subsystem can detect rightward motion of the ball			
Pass/Fail Condition	Pass/Fail Condition: N/A			
Pre-Conditions: CV Subsystem successfully connects to camera, ball is being detected				
Input: Ball is moved rightwards				
Expected Results: C tion	CV tracks the ball in mo-	Actual Results: As expe	ected	
Post-Conditions: N/A				

Table 11: Ball Rightward Detection Test

Test ID: CV5	Ball Leftward	Detection Test	Status: PASS	
Description: Tests if CV	Subsystem can dete	ct leftward motion of the b	all	
Pass/Fail Condition: N/A				
Pre-Conditions: CV Subsystem successfully connects to camera, ball is being detected				
Input: Ball is moved leftward				
Expected Results: CV tra	icks the ball in mo-	Actual Results: As expec	ted	
Post-Conditions: N/A				

Table 12: Ball Leftward Detection Test

Test ID: CV6	CV Time	eout Test	Status: PASS		
Description: Tests if CV sub	Description: Tests if CV subsystem times out				
Pass/Fail Condition: Times out within 1 second of initiation					
Pre-Conditions: CV is in state 1					
Input: N/A					
Expected Results: Times ou	t in 8 seconds	Actual Results: As expected			
Post-Conditions: cvmodule	is closed				

Table 13: CV Timeout Test

Test ID: CV7 CV Transit	ion: State 1 to 2	Status: PASS		
Description: Tests that the CV state transitions from state 1 to 2 when ball is moving away from player				
Pass/Fail Condition: State changes within 0.5 seconds of real-time				
Pre-Conditions: CV is in state 1				
Input: Ball is moving towards system-side				
Expected Results: CV moves to state 2				
Post-Conditions: CV is in state 2				

Table 14: CV Transition: State 1 to 2

Test ID: CV8	CV Transition	n: State 2 to 3	Status: PASS	
Description: Tests that	the CV state transit	ions from state 2 to 3 whe	en ball is descending	
Pass/Fail Condition: State changes within 0.5 seconds of real-time				
Pre-Conditions: CV is in state 2				
Input: Ball is moved downward in frame				
Expected Results: CV r	noves to state 3	Actual Results: As exp	ected	
Post-Conditions: CV is	in state 3			

Table 15: CV Transition: State 2 to 3

Test ID: CV9	CV Transitio	n: State 3 to 0	Status: PASS	
Description: Tests th	hat the CV state transit	tions from state 3 to 0 who	en ball is ascending	
Pass/Fail Condition: State changes within 0.5 seconds of real-time				
Pre-Conditions: CV is in state 3				
Input: Ball is moved upward in frame				
Expected Results: C	V moves to state 0	Actual Results: As exp	ected	
Post-Conditions: CV	7 is in state 0			

Table 16: CV Transition: State 3 to 0

Test ID: CV10	Hit Signal to Si	martServe Test	Status: PASS	
Description: Tests that	at the CV Subsystem se	nds a "GOOD" signal to Sm	artServe	
Pass/Fail Condition: N/A				
Pre-Conditions: CV is in state 3				
Input: Ball is moved upward in frame				
Expected Results: "C SmartServe	GOOD" signal sent to	Actual Results: As expecte	d	
Post-Conditions: CV is in state 0				

Table 17: Hit Signal to SmartServe Test

Test ID: CV11	CV Accu	racy Test	Status: ???	
Description: CV should de	etect successful hits	s and misses		
Pass/Fail Condition: 80%	Pass/Fail Condition: 80% accuracy rate			
Pre-Conditions: N/A				
Input: 10 bounces and 10	misses will be thro	own in front of the camera		
Expected Results: CV s each throw correctly	ubsystem detects	Actual Results: ???		
Post-Conditions: N/A				

Table 18: CV Accuracy Test

4.2.2 ShotRecommender

Test ID: SR1	ShotRecommen	der Listen Test	Status: PASS	
Description: The Shot	Description: The ShotRecommender service responds to HTTP calls on port 8080.			
Pass/Fail Condition: The system waits until a request.				
Pre-Conditions: N/A				
Input: None				
Expected Results: N/A	l	Actual Results: As ex	pected	
Post-Conditions: N/A			_	

Table 19: ShotRecommender Listen Test

Test ID: SR2	$\mathbf{ShotRecom}$	mender Query Test	Status: FAIL		
Description: The Sho	Description: The ShotRecommender calls the "query" method for user data.				
Pass/Fail Condition: The call returns a table of user performance data.					
Pre-Conditions: The SQL database is running on port 3306.					
Input: a valid user id for the "performance" procedure					
Expected Results: table of data					
Post-Conditions: N/A					

Table 20: ShotRecommender Query Test

Test ID: SR3 ShotRecommender	Random Shot Test Status: PASS			
Description: The ShotRecommender receives a request for a shot.				
Pass/Fail Condition: The service generates a random shot.				
Pre-Conditions: The service is running on port 8080.				
Input: an HTTP request with "Random" as the mode parameter				
Expected Results: a random shot which adheres to requirements	Actual Results: As expected			
Post-Conditions: N/A				

Table 21: Shot Recommender Random Shot Test

Test ID: SR4	${\bf Shot Recommender}$	Training Shot Test	Status: FAIL
Description: The Sh	notRecommender receives	a request for a shot.	
Pass/Fail Condition: The service generates a shot.			
Pre-Conditions: The service is running on port 8080.			
Input: an HTTP request with "Train" as the mode parameter			
Expected Results: a heres to requirement	random shot which ad- ts	Actual Results: Model not	found
Post-Conditions: N/	'A		

Table 22: ShotRecommender Training Shot Test

Test ID: SR5	${f ShotRecommender}$	UpdateModel Test	Status: FAIL
Description: The	ShotRecommender receives	a status update for a shot.	
Pass/Fail Condition: The service changes the model in response.			
Pre-Conditions: The service is running on port 8080.			
Input: an HTTP request with the shot id and returned boolean as parameters.			
Expected Results:	the model is updated	Actual Results: Model not	found
Post-Conditions:	N/A		

 ${\bf Table~23:~ShotRecommender~UpdateModel~Test}$

4.2.3 Shooting Model

Test ID: SM1	ShootingModel calcu	ulateYawAngle Test	Status: PASS	
Description: The o	Description: The calculateYawAngle method returns an accurate yaw angle in degrees.			
Pass/Fail Conditio	Pass/Fail Condition: The method returns an angle in degrees accurate to a whole number.			
Pre-Conditions: N/A				
Input: xDist, yDist; distance to desired shot's x-coordinate and y-coordinate.				
Expected Results: accurate to a whol	A yaw angle in degrees, e number.	Actual Results: As expected		
Post-Conditions: N/A				

 ${\bf Table~24:~Shooting Model~calculate Yaw Angle~Test}$

Test ID: SM2	ShootingModel cal	culateVelocity Test	Status: PASS
Description: The o	calculateVelocity method re	eturns an accurate velocity i	n meters/second.
Pass/Fail Condition: The method returns the velocity accurate to a whole number.			
Pre-Conditions: N/A			
Input: N/A			
Expected Results: to a whole number	Velocity in m/s, accurate	Actual Results: As expect	ed
Post-Conditions: N	N/A		

 ${\bf Table~25:~Shooting Model~calculate Veolocty~Test}$

Test ID: SM3	ShootingModel netl	HeightChecker	Test	Status: PASS
Description: Thene the net.	etHeightChecker method cl	necks whether the	desired shot	will pass over
Pass/Fail Condition pass over the net.	n: The method returns th	ne correct boolean	indicating i	f the shot will
Pre-Conditions: N	/A			
Input: N/A.				
_	A boolean; True is shot net, False otherwise.	Actual Results: A	As expected	
Post-Conditions: N	J/A			

 ${\bf Table~26:~Shooting Model~net Height Checker~Test}$

4.2.4 Data Storage

Test ID: DS1	Data Storage	Sign Up Test	Status: PASS
Description: Data Storag	ge receives user name	e and password to sign up	
Pass/Fail Condition: User table updates with correct parameters			
Pre-Conditions: The SQL database is running on port 3306.			
Input: User name and user password			
Expected Results: User	table updated	Actual Results: As expect	sed
Post-Conditions: N/A			

Table 27: Data Storage Sign Up Test

Test ID: DS2	Data Storage N	Next Shot Test	Status: PASS	
Description: Data Storage	Description: Data Storage returns a shot type for the system to execute			
Pass/Fail Condition: a specified desired zone the system must aim for is returned			s returned	
Pre-Conditions: The SQL database is running on port 3306.				
Input: Desired zone id as an integer				
Expected Results: Return eters, speed and angular	*	Actual Results: As expec	cted	
Post-Conditions: N/A				

Table 28: Data Storage Next Shot Test

Test ID: DS3	Data Storage I	Returned Test	Status: PASS
Description: Data Stor	age received parameter	rs for a successful or missed s	shot
Pass/Fail Condition: Returnrate table updates with correct parameters			
Pre-Conditions: The SQL database is running on port 3306.			
Input: Timestamp, user and shot ids			
Expected Results: Retu	rnrate table updated	Actual Results: As expecte	d
Post-Conditions: N/A			

Table 29: Data Storage Returned Test

Test ID: DS4 Data Storage	Sign In Test	Status: PASS		
Description: Data Storage receives user name	Description: Data Storage receives user name and password and authenticates it			
Pass/Fail Condition: Returns accurate boolean value according to matching of user name and password				
Pre-Conditions: The SQL database is running on port 3306.				
Input: User name and user password	Input: User name and user password			
Expected Results: True is returned if the password matches the user name, false if they do not match				
Post-Conditions: N/A				

Table 30: Data Storage Sign In Test

Test ID: DS5	Data Storage	Statistics Test	Status: PENDING		
Description: Data Storage	Description: Data Storage provides return rate given a time frame				
Pass/Fail Condition: Returns return information given a range of time stamp inputs					
Pre-Conditions: The SQL database is running on port 3306.					
Input: Time stamp range					
Expected Results: Return inputed range	n stats within the	Actual Results: N/A	A		
Post-Conditions: N/A					

Table 31: Data Storage Statistics Test

4.2.5 User Interface

Test ID: UI1 User Interfac	e Display Test	Status: PASS	
Description: All elements of UI are displayed	l in a window		
Pass/Fail Condition: UI displays when program is run			
Pre-Conditions:N/A			
Input: N/A			
Expected Results: Window opens with Welcome Screen	Actual Results: As expecte	d	
Post-Conditions: Application running			

Table 32: User Interface Display Test

Test ID: UI2	User Interface	e Button Test	Status: PASS
Description: All buttons	should do some action	on when pressed	
Pass/Fail Condition: When pressed, buttons change the state of the application and return			
Pre-Conditions: Application UI is running			
Input: N/A			
Expected Results: Returnis pressed	n true when button	Actual Results: As	expected
Post-Conditions: N/A			

Table 33: User Interface Button Test

Test ID: UI3	User Interfac	e Mode Test	Status: PASS
Description: Mode should be	e assigned when	it is picked in a dropdown	
Pass/Fail Condition: Mode variable assigned selected value			
Pre-Conditions: Application UI is running			
Input: N/A			
Expected Results: Return v	value selected	Actual Results: As expecte	d
Post-Conditions: N/A			

Table 34: User Interface Mode Test

Test ID: UI4	User Interface	Sign up Test	Status: FAIL
Description: When si	ignup button is pressed,	user is added with given par	rameters
Pass/Fail Condition: User inputs are sent to Data Storage			
Pre-Conditions: Application UI is running			
Input: User name and	d user password		
Expected Results: Re	eturn user parameters	Actual Results: Page not i	implemented
Post-Conditions: N/A	A		

Table 35: User Interface Sign up Test

Test ID: UI4	User Interface	e Sign up Test	Status: FAIL
Description: When signup	button is pressed,	user is added with given para	ameters
Pass/Fail Condition: User inputs are sent to Data Storage			
Pre-Conditions: Application UI is running			
Input: User name and user password			
Expected Results: Return	user parameters	Actual Results: Page not in	nplemented
Post-Conditions: N/A			

Table 36: User Interface Sign up Test

Test ID: UI5	User Interface	e Log In Test	Status: FAIL
Description: When logic	n button is pressed, u	ser is authenticated	
Pass/Fail Condition: User inputs are sent to Data Storage			
Pre-Conditions: Application UI is running			
Input: User name and u	user password		
Expected Results: Retraction matches user name	urn true if password	Actual Results: Page not	implemented
Post-Conditions: N/A			

Table 37: User Interface Log In Test

Test ID: UI6	User Interface	Statistics Test	Status: PENDING
Description: Statistics show	on page		
Pass/Fail Condition: Releva	ant page shows w	hen statistics tab is p	oressed
Pre-Conditions: Application	n UI is running		
Input: N/A			
Expected Results: Statistic	s page displays	Actual Results: N/	A
Post-Conditions: N/A			

Table 38: User Interface Statistics Test

4.2.6 SmartServe

Test ID: SS1 ShotRecommendation Connection Test - Pass Status: PASS

Description: The ShotRecommendation class will call the connect method with port 8080 as a parameter.

Pass/Fail Condition: The method should return true.

Pre-Conditions: The ShotRecommendation server is running on port 8080.

Input: 8080

Expected Results: true Actual Results: As expected

Post-Conditions: N/A

Table 39: ShotRecommendation Connection Test - Pass

Test ID: SS2 Shot	Recommendation	Connection Test - Fail	Status: PASS
Description: The Shotlas a parameter.	Recommendation class	will call the <i>connect</i> method	with port 8090
Pass/Fail Condition: The method should return false.			
Pre-Conditions: The ShotRecommendation server is running on port 8080.			
Input: 8090			
Expected Results: false	e	Actual Results: As expected	
Post-Conditions: N/A			

Table 40: ShotRecommendation Connection Test - Fail

Test ID: SS3 ShotRecommendation Request Shot - Random Status: PASS
Description: The ShotRecommendation class will call the $getRecommendation$ method with Random mode as a parameter.
Pass/Fail Condition: The method should a random shot of the form "X=A.BC,Y=A.BC,V=A.BC,W=A.BC" where the values are within the requirements of the system.
Pre-Conditions: The ShotRecommendation server is running on port 8080. Input: Mode.Random
Expected Results: A valid shot, in string Actual Results: As expected form.
Post-Conditions: N/A

Table 41: Shot Recommendation Request Shot - Random

Test ID: SS4 ShotRecommendation Request Shot - Train Status: FAIL
Description: The ShotRecommendation class will call the getRecommendation method with Training mode as a parameter.
Pass/Fail Condition: The method should a shot of the form "X=A.BC,Y=A.BC,V=A.BC,W=A.BC" where the values are within the requirements of the system.
Pre-Conditions: The ShotRecommendation server is running on port 8080. Input: Mode.Train
Expected Results: A valid shot, in string Actual Results: Model not found form.
Post-Conditions: N/A

Table 42: ShotRecommendation Request Shot - Train

Test ID: SS5 ShotRecommendation Request Shot - One-shot Status: PASS			
Description: The ShotRecommendation class will call the $getRecommendation$ method with One-shot mode as a parameter.			
Pass/Fail Condition: The method should a shot of the form "X=A.BC,Y=A.BC,V=A.BC,W=A.BC" where the values are within the requirements of the system. Repeated requests should return the same shot.			
Pre-Conditions: The ShotRecommendation server is running on port 8080. Input: Mode.OneShot			
Expected Results: A valid shot, in string Actual Results: As expected form.			
Post-Conditions: N/A			

Table 43: ShotRecommendation Request Shot - One-shot

Test ID: SS6	ShotRecommendat	ion Model Update	Status: FAIL
Description: The S	ShotRecommendation class	will call the updateModel n	nethod.
Pass/Fail Condition updated.	Pass/Fail Condition: The ShotRecommender does not throw an error and the model is updated.		
Pre-Conditions: The ShotRecommendation server is running on port 8080.			
Input: a previously request shot and false			
Expected Results:	N/A	Actual Results: Model no	t found
Post-Conditions: I	N/A		

 ${\bf Table~44:~ShotRecommendation~Model~Update}$

Test ID: SS7	$\operatorname{ShotRecommendat}$	ion Model Update	Status: FAIL
Description: The Sh	notRecommendation class	will call the <i>updateModel</i> met	hod.
Pass/Fail Condition: The ShotRecommender does not throw an error and the model is updated.			d the model is
Pre-Conditions: The ShotRecommendation server is running on port 8080.			
Input: a previously request shot and true			
Expected Results: 1	$\overline{N/A}$	Actual Results: Model not for	ound
Post-Conditions: N	/A		

Table 45: Shot Recommendation Request Shot - One-shot

Test ID: SS8 ComputerVisionController Connection Test - PassStatus: PASS		
Description: The CV class will call the conn	ection method.	
Pass/Fail Condition: The method returns tru	ie.	
Pre-Conditions: The CV server is running on port 8000.		
Input: 8000		
Expected Results: true Actual Results: As expected		
Post-Conditions: N/A		

Table 46: Computer Vision
Controller Connection Test - Pass

Test ID: SS9 ComputerVisionController Connection Test - Fail Status: PASS

Description: The CV class will call the connection method.

Pass/Fail Condition: The method returns false.

Pre-Conditions: The CV server is running on port 8001.

Input: 8000

Expected Results: false Actual Results: As expected

Post-Conditions: N/A

Table 47: ComputerVisionController Connection Test - Fail

Test ID: SS10 ComputerVisionController Detect Test - Timeout Status: PASS

Description: The CV class will call the start method and no ball is introduced into the frame.

Pass/Fail Condition: The method returns false.

Pre-Conditions: The CV server is running on port 8000.

Input: N/A

Expected Results: false

Actual Results: As expected

Post-Conditions: N/A

Table 48: ComputerVisionController Detect Test - Timeout

Table 49: ComputerVisionController Detect Test - Detect

Test ID: SS12	SQLConnector Connection Test - Pass Status: PAS		Status: PASS
Description: The	SQLConnector class will ca	ll the connect method.	
Pass/Fail Condition: The method returns true.			
Pre-Conditions: The SQL server is running on port 3306.			
Input: 3306			
Expected Results:	true	Actual Results: As expect	ted
Post-Conditions: N/A			

Table 50: SQLConnector Connection Test - Pass

Test ID: SS13

SQLConnector Connection Test - Fail

Description: The SQLConnector class will call the connect method.

Pass/Fail Condition: The method returns false.

Pre-Conditions: The SQL server is not running.

Input: 3306

Expected Results: false

Actual Results: As expected

Post-Conditions: N/A

Table 51: SQLConnector Connection Test - Pass

Test ID: SS14	SQLConnector Qu	nery Test - Signup	Status: PASS
Description: The SQ	LConnector class will ca	ll the save method.	
Pass/Fail Condition:	Pass/Fail Condition: The user is saved in the database.		
Pre-Conditions: The SQL server is running on port 3306.			
Input: Object[] with "Chris" and "password123" for the "sign_up" procedure			
Expected Results: tr	rue	Actual Results: As expect	ted
Post-Conditions: N/	A		

Table 52: SQLConnector Query Test - Signup

Test ID: SS15	SQLConnector Que	ery Test - Returned	Status: PASS
Description: The S	QLConnector class will ca	ll the save method.	
Pass/Fail Condition	n: The shot is saved in the	e database correctly.	
Pre-Conditions: The SQL server is running on port 3306.			
Input: Object[] wit	ch 25, 1, 1 and the current	time for the "returned" pr	rocedure
Expected Results:	true	Actual Results: As expec	cted
Post-Conditions: N	I/A		

Table 53: SQLConnector Query Test - Returned

Test ID: SS16 SQLConnector Q	uery Test - Login	Status: PASS
Description: The SQLConnector class will ca	ll the save method.	
Pass/Fail Condition: The shot is saved in the database correctly.		
Pre-Conditions: The SQL server is running on port 3306.		
Input: Object[] with "Chris" and "password123" for the "login" procedure		
Expected Results: true	Actual Results: As expected	I
Post-Conditions: N/A		

Table 54: SQLConnector Query Test - Returned

Test ID: SS17 ArduinoController	r Connection Test - Pass	Status: PASS
Description: The ArduinoController class	will call the <i>test</i> method, repeat	for all arduinos.
Pass/Fail Condition: The method returns true.		
Pre-Conditions: The Arduinos are plugged in via USB and loaded with the correct code.		
Input: the port for the Arduino(s)		
Expected Results: true	Actual Results: As expecte	d
Post-Conditions: N/A		

Table 55: ArduinoController Connection Test - Pass

Test ID: SS18	ArduinoController C	onnection Test - Fail	Status: PASS	
Description: The	ArduinoController class will	call the <i>test</i> method, repeat	t for all arduinos.	
Pass/Fail Condit	Pass/Fail Condition: The method returns false.			
Pre-Conditions: The Arduinos are plugged in via USB and loaded with the correct code.				
Input: "some-tes	t-string"			
Expected Results	s: false	Actual Results: As expected	ed	
Post-Conditions:	N/A			

Table 56: ArduinoController Connection Test - Fail

Test ID: SS19	ArduinoContro	ller Test - Pan	Status: PASS
Description: The Ar	duinoController class wil	call the <i>shoot</i> method.	
Pass/Fail Condition: The system pans to 75 degrees.			
Pre-Conditions: The Arduinos are plugged in via USB and loaded with the correct code.			he correct code.
Input: a ShotDetail object with pan of 75 degrees			
Expected Results: tr	rue	Actual Results: As expected	ed
Post-Conditions: N/	A		

Table 57: ArduinoController Test - Pan

Test ID: SS20	ArduinoContro	oller Test - Pan	Status: PASS
Description: The Arc	duinoController class wil	l call the <i>shoot</i> method.	
Pass/Fail Condition: The system pans to 120 degrees.			
Pre-Conditions: The Arduinos are plugged in via USB and loaded with the correct code			h the correct code.
Input: a ShotDetail object with pan of 120 degrees			
Expected Results: tr	ue	Actual Results: As expe	ected
Post-Conditions: N/A	A		

Table 58: ArduinoController Test - Pan

Test ID: SS21	ArduinoControl	ler Test - Shoot	Status: PASS
Description: The Arc	duinoController class wil	call the shoot method.	
Pass/Fail Condition:	The system shoots at 7	5% power.	
Pre-Conditions: The	Arduinos are plugged in	via USB and loaded with	the correct code.
Input: 75			
Expected Results: tr	ue	Actual Results: As expec	eted
Post-Conditions: N/	A		

Table 59: ArduinoController Test - Shoot

Test ID: SS22	${\bf Arduino Controller}$	Test - Shoot	Status: PASS
Description: The Ardu	ninoController class will ca	all the <i>shoot</i> method.	
Pass/Fail Condition: The system shoots at 100% power.			
Pre-Conditions: The Arduinos are plugged in via USB and loaded with the correct code.			correct code.
Input: 100			
Expected Results: true	e Ac	ctual Results: As expected	
Post-Conditions: N/A			

Table 60: ArduinoController Test - Shoot

4.3 Hardware Integration Testing

4.3.1 Shooting Testing

Test ID: HI1	Shooting Te	est - Shot 1	Status: ???
Description: The syst	em can fetch a shot with	h ID: 48 and shoot it	
Pass/Fail Condition:	N/A		
Pre-Conditions: The system is in the home position.			
Input: one-shot mode	e set at ID 48.		
Expected Results: T with a pitch of 30 and	The shot hits zone 17, I roll angle of 0.	Actual Results: ???	
Post-Conditions: N/A			

Table 61: Shooting Test - Shot 1

Test ID: HI2	Shooting Test - Shot 2											
Description: The system can fetch a shot with ID: 91 and shoot it												
Pass/Fail Condition: N/A												
Pre-Conditions: The system is in the home position.												
Input: one-shot mod	Input: one-shot mode set at ID 91.											
Expected Results: 7 with a pitch of 10 and	The shot hits zone 12, and roll angle of 90.	Actual Results: ???										
Post-Conditions: N/	A											

Table 62: Shooting Test - Shot 2

Test ID: HI3 Shooting Test - C	Status: ???									
Description: The system can shoot two shots consecutively with IDs 148 and 193.										
Pass/Fail Condition: N/A										
Pre-Conditions: The system is in the home position.										
Input: one-shot mode set at ID 148 and then	193.									
Expected Results: The shot hits zone 5, with	Actual Results: ???									
a pitch of 10 and roll angle of 180, which										
is followed by another shot that hits zone 2										
with a pitch of 0 and roll angle of 270.										
Post-Conditions: N/A										

Table 63: Shooting Test - Consecutive Shots

Test ID: HI4	Shooting Test -	- Repeatability	Status: ???									
Description: The system can shoot three shots consecutively with IDs 148, 193 and 148.												
Pass/Fail Condition: The same zone is hit for the first and third shot, at the same pitch and roll angles.												
Pre-Conditions: The sys	Pre-Conditions: The system is in the home position.											
Input: one-shot mode se	Input: one-shot mode set at ID 148, 193 and then 148.											
Expected Results: the should be identical	first and third shot	Actual Results: ???										
Post-Conditions: N/A
