Figure 1: Revision History

1 Executive Summary of Testing

The testing completed on February 17th, 2018 has yielded 44 passes, 10 failures, and 3 pending. Pending tests have not been executed due to lack of relevance at this stage. The failures in their entirety can be attributed to features that are in progress or that have not yet been implemented including; automated roll and pitch as well as the machine learning model. Given that the failure rate is roughly 17%, the team does not recommend operation of the project at this time.

An important note to consider is that most errors are localized in the Shooting Mechanism and ShotRecommender subsystems. The team would also like to expand testing further to have higher coverage of the system and increase their confidence in its reliability.

The team will continue developing the system until March 9th where tests will be redefined and added to satisfy the team's ideals. After which, the second round of testing will commence.

2 Introduction

2.1 Project Overview

SmartServe is an autonomous table tennis training system for table tennis players with various skill levels. SmartServe aids in diagnosing and improving a player's performance over time. The system trains table tennis players by shooting table tennis balls towards the player and detects successful returns from the player. The system can further adapt to the player's weaknesses and help them overcome it through further training. Importantly, SmartServe alleviates the problems of finding and working with a coach for players, as well as coaches trying to train multiple players simultaneously. The system will be deemed a success if the table tennis players and coaches can enjoy and see some value added by using SmartServe.

The project started at the beginning of the Fall 2017 academic term and will conclude at the end of the Winter 2018 term. In addition, the core project team consists of final year Software and Mechatronics Engineering students who are enrolled in the MECHTRON 4TB6/SFWRENG 4G06 capstone project course.

2.2 Document Overview

This document will provide details of all formal testing methods and results performed on the SmartServe system. The first part of testing includes detailing how it will be performed and the details of the system on which it is run. This matters due to details which can affect the testing outcomes like operating system, lighting or performance of hardware. The schedule for the test will also be detailed alongside the major deliverables to have clear outcomes to explain to stakeholders. The testing will be preformed off of the *master* branch as it stands during the beginning of the testing phase.

The actual testing will then be detailed as test cases based on what subsystem they are testing. As needed, the communication will be tested in between the subsystems to ensure communication is working as intended. Lastly, a test case-requirement matrix will be provided which maps what test cases test which requirement. This will give the reader a simple way to check if a requirement is fully satisfied.

2.3 Naming Conventions and Terminology

The following terms and definitions will be used throughout this document:

- ACID: a database transaction which is atomic, consistent, isolated and durable
- CV: computer vision
- **FPS**: frames per second
- FSM: finite state machine, shows transitions between states
- GUI: graphical user interface
- **IPO**: input process output
- **Pitch**: rotation along the y-axis; this rotation angle primarily dictates the range of the ball from the net to the edge of the table on the user side
- Roll: rotation along the x-axis
- Shooting Mechanism: refers to the part of the system that shoots the table tennis balls towards the user side (player) Please refer to Figure ?? for visual illustration
- System: encompasses both the hardware and software parts of SmartServe
- **System Side**: the side of the table where the electromechanical system is placed; it is the opposite side of the User Side Please refer to Figure ?? for visual illustration
- TCP: transmission control protocol
- Team: all team members of the core capstone project, as noted in the list of Authors
- User Side: the side of the table where the user (player) is standing
- Yaw: rotation along the z-axis; this rotation angle primarily dictates the panning functionality of the shooting mechanism from the right side to the left side of the table

3 Testing Philosophy

3.1 Approach

The approach to testing will be to separate the subsystems as much as possible and test them accordingly. Every subsystem will be unit tested in JUnit or PyUnit if implemented in Java or Python respectively. The shooting mechanism will be tested manually to ensure it is functional properly. Stubbing a service or dependancy can be done to return consistent, reliable and predictable results. For instance, the SmartServe system may use a stub for the CV subsystem to return a predefined sequence of pass/fail flags.

When preforming the tests, every test will be run three times unless specified otherwise. The test must be satisfied for 2 or 3 of the attempts to be determined successful.

3.2 Schedule

Task	Date	Notes
Complete Test Cases	February 13, 2018	N/A
Run Tests (First)	February 16, 2018	N/A
Edit Test Cases	March 9, 2018	N/A
Run Tests (Second)	March 16, 2018	N/A

Table 1: Testing Schedule

3.3 Environment

The SmartServe system uses heavy computation power due to the CV and ML models, so the system which runs the test will have the following details. The system will be a 15-inch Macbook Pro (Late 2016) running macOS High Sierra (10.13). The Macbook Pro has an 2.6 GHz Intel Core i7 CPU and a Radeon Pro 450 2GB GPU. The location will be in Thode Makerspace where the CV will be adjusted as necessary for those lighting conditions.

3.4 Code Reviews

As per the Development Plan document, the team will be using branches on GitHub to control additions into the source code. The list of Pull Requests can be found here here. Although it is impossible to test whether it is better that they were made as opposed to all members contributing to the same branch, few commits have had to be made directly to the develop branch, and 0 to the master branch, which indicates the system is working as expected.

3.5 Setup Instructions

The following items should be preformed in succession to set up the system for testing.

- Data Storage: delete the *smartserve* database if it exists, and dump the only SQL file in src/Database into a new *smartserve* database
- Arduino: add the .cpp and .h files for AutomaticPanning, AutomaticRoll, Pitch and FeedAndShoot, then load the FeedPitchAndShoot sketch onto the top Arduino, and PanAndRoll sketch onto the bottom Arduino
- ComputerVision: connect the webcam over USB, and run src/ComputerVision/cv.py using Python 3.6
- ShotRecommender: run the src/ShotRecommender/shotRecommender.py using Python 3.6
- SmartServe: replace the port strings in the Controller.java with the associated ports using the Arduino desktop application for both ardunios

4 Test Cases

4.1 Electromechanical Subsystems

4.1.1 Shooting Mechanism

Test ID: SMC1	Feeding Mechanis	sm Rotation Test	Status: PASS		
Description: The fee	ding mechanism rotates	by given amount in degrees.			
/	Pass/Fail Condition: The feeding mechanism rotates by given amount of degrees within a tolerance of 2 degrees.				
Pre-Conditions: The	Pre-Conditions: The feeding mechanism is ready/powered on.				
Input: Integer indica	Input: Integer indicating the amount of degrees to be rotated.				
Expected Results: 1 tates to the required	Feeding mechanism roposition.	Actual Results: One ball is s	hot at a time		
Post-Conditions: N/A					

Table 2: Feeding Mechanism Rotation Test

Test ID: SMC2 Shooting C	ontrol Test	Status: PASS			
Description: The shooting control shoots the power level to achieve the desired speed.	Description: The shooting control shoots the ball using a rotating wheel at the requested power level to achieve the desired speed.				
Pass/Fail Condition: The system must reach amount of power, within 0.1 metres of error.	Pass/Fail Condition: The system must reach the same distance each time for the same amount of power, within 0.1 metres of error.				
Pre-Conditions: The Shooting Control motor	Pre-Conditions: The Shooting Control motor is powered on, and connected to the system.				
Input: Integer between 0-100 indicating the power level of the shot.					
Expected Results: 2 successive shots land in	Actual Results: 2 successiv	e shots land			
the same spot	in the same spot				
Post-Conditions: N/A					

Table 3: Shooting Control Test

Test ID: SMC3	Four Position	on Roll Test	Status: FAIL		
Description: The system rot	Description: The system rotates the Shooting Control to one of the four default positions.				
Pass/Fail Condition: Rotate	Pass/Fail Condition: Rotates to the indicated position.				
Pre-Conditions: The Shooti	Pre-Conditions: The Shooting Control motor is powered on, and connected to the system.				
Input: Integer between 0-3 indicating the desired default position.					
Expected Results: The shoot tates to the requested defau	O	Actual Results: Not im	plemented		
Post-Conditions: N/A					

Table 4: Four Position Roll Test

Test ID: SMC4	Adjustable Pito	ch Control Test	Status: FAIL		
Description: The pitch of	Description: The pitch control angles the shooting mechanism at the desired pitch level.				
Pass/Fail Condition: Ro	Pass/Fail Condition: Rotate to the desired pitch level with a tolerance of 5 degrees.				
Pre-Conditions: N/A	Pre-Conditions: N/A				
Input: Integer between	Input: Integer between -15 deg to 45 deg indicating pitch angle.				
Expected Results: Roperted pitch level with a tolerary		Actual Results: Not impleme	ented		
Post-Conditions: N/A					

Table 5: Adjustable Pitch Control Test

Test ID: SMC5 Panning Shooting Mech	anism Across the Table Status: PASS			
Description: Move the system to face the direction specified in degrees.				
Pass/Fail Condition: System moved to desired position.				
Pre-Conditions: Panning stage is homed correctly before moving to the first location.				
Input: Integer between 60 deg to 120 deg indicating where to point the shooter.				
Expected Results: Moves to the desired po- Actual Results: Moves to desired posi-				
sition without going out of bounds.	tions			
Post-Conditions: When powered down, the system rotates to the home (0 degrees) position.				

Table 6: Panning Shooting Mechanism Test

Test ID: SMC6	Shut Off Power	er Switch Test	Status: PENDING		
Description: Switch on situation	the machine cuts p	ower to the system in	n case of an emergent		
Pass/Fail Condition: Sy	Pass/Fail Condition: Systems shuts off when flicking the switch				
Pre-Conditions: Machine must be on					
Input: N/A					
Expected Results: Power switch is used	er shuts off when the	Actual Results: N/A	L		
Post-Conditions: System	n is off				

Table 7: Shut Off Power Switch Test

4.2 Software Subsystems

4.2.1 Computer Vision

Test ID: CV1	Ball Detec	ction Test	Status: PASS		
Description: Tests if CV subsys	tem can detec	et a table tennis ball			
Pass/Fail Condition: N/A	Pass/Fail Condition: N/A				
Pre-Conditions: CV subsystem successfully connects to camera					
Input: Ball is placed in frame					
Expected Results: CV subsystem detects Actual Results: As expected ball					
Post-Conditions: N/A					

Table 8: Ball Detection Test

Test ID: CV2	Ball Upward I	Detection Test	Status: PASS
Description: Tests if CV	V Subsystem can dete	ct upward motion of the ball	
Pass/Fail Condition: N	/A		
Pre-Conditions: CV Subsystem successfully connects to camera, ball is being detected			ing detected
Input: Ball is lifted upv	vards		
Expected Results: CV to	racks the ball in mo-	Actual Results: As expected	l
Post-Conditions: N/A			

Table 9: Ball Upward Detection Test

Test ID: CV3	Ball Downward	Detection Test	Status: PASS
Description: Tests if CV	Subsystem can dete	ct downward motion of the	e ball
Pass/Fail Condition: N/A			
Pre-Conditions: CV Subsystem successfully connects to camera, ball is being detected			
Input: Ball is moved downward			
Expected Results: CV tr tion	acks the ball in mo-	Actual Results: As expec	cted
Post-Conditions: N/A			

Table 10: Ball Downward Detection Test

Test ID: CV4	Ball Rightward	Detection Test	Status: PASS
Description: Tests if	f CV Subsystem can dete	ct rightward motion of th	e ball
Pass/Fail Condition: N/A			
Pre-Conditions: CV Subsystem successfully connects to camera, ball is being detected			s being detected
Input: Ball is moved rightwards			
Expected Results: C tion	CV tracks the ball in mo-	Actual Results: As expe	ected
Post-Conditions: N/	/A		

Table 11: Ball Rightward Detection Test

Test ID: CV5	Ball Leftward	Detection Test	Status: PASS
Description: Tests if CV	Subsystem can dete	ct leftward motion of the b	all
Pass/Fail Condition: N/A			
Pre-Conditions: CV Subsystem successfully connects to camera, ball is being detected			
Input: Ball is moved leftward			
Expected Results: CV tra	icks the ball in mo-	Actual Results: As expec	ted
Post-Conditions: N/A			

Table 12: Ball Leftward Detection Test

Test ID: CV6	CV Time	eout Test	Status: PASS
Description: Tests if CV sub	system times ou	t	
Pass/Fail Condition: Times out within 1 second of initiation			
Pre-Conditions: CV is in state 1			
Input: N/A			
Expected Results: Times ou	t in 8 seconds	Actual Results: As expected	
Post-Conditions: cvmodule	is closed		

Table 13: CV Timeout Test

Test ID: CV7 CV Transit	ion: State 1 to 2	Status: PASS	
Description: Tests that the CV state tra away from player	ansitions from state 1 to 2 v	when ball is moving	
Pass/Fail Condition: State changes within 0.5 seconds of real-time			
Pre-Conditions: CV is in state 1			
Input: Ball is moving towards system-side			
Expected Results: CV moves to state 2	Actual Results: As exp	ected	
Post-Conditions: CV is in state 2			

Table 14: CV Transition: State 1 to 2

Test ID: CV8	CV Transition	n: State 2 to 3	Status: PASS
Description: Tests that	the CV state transit	ions from state 2 to 3 whe	en ball is descending
Pass/Fail Condition: State changes within 0.5 seconds of real-time			
Pre-Conditions: CV is in state 2			
Input: Ball is moved downward in frame			
Expected Results: CV r	noves to state 3	Actual Results: As exp	ected
Post-Conditions: CV is	in state 3		

Table 15: CV Transition: State 2 to 3

Test ID: CV9	CV Transitio	n: State 3 to 0	Status: PASS
Description: Tests th	hat the CV state transit	tions from state 3 to 0 who	en ball is ascending
Pass/Fail Condition:	Pass/Fail Condition: State changes within 0.5 seconds of real-time		
Pre-Conditions: CV is in state 3			
Input: Ball is moved upward in frame			
Expected Results: C	V moves to state 0	Actual Results: As exp	ected
Post-Conditions: CV	7 is in state 0		

Table 16: CV Transition: State 3 to 0

Test ID: CV10	Hit Signal to Si	martServe Test	Status: PASS
Description: Tests that	at the CV Subsystem se	nds a "GOOD" signal to Sm	artServe
Pass/Fail Condition:	N/A		
Pre-Conditions: CV is	s in state 3		
Input: Ball is moved upward in frame			
Expected Results: "C SmartServe	GOOD" signal sent to	Actual Results: As expecte	d
Post-Conditions: CV	is in state 0		

Table 17: Hit Signal to SmartServe Test

4.2.2 ShotRecommender

Test ID: SR1	ShotRecommen	der Listen Test	Status: PASS
Description: The ShotRe	ecommender service i	responds to HTTP calls	on port 8080.
Pass/Fail Condition: The system waits until a request.			
Pre-Conditions: N/A			
Input: None			
Expected Results: N/A		Actual Results: As exp	ected
Post-Conditions: N/A			

Table 18: ShotRecommender Listen Test

Test ID: SR2	$\mathbf{ShotRecomme}$	nder Query Test	Status: FAIL
Description: The Sl	hotRecommender calls th	ne "query" method for user da	ata.
Pass/Fail Condition: The call returns a table of user performance data.			
Pre-Conditions: The SQL database is running on port 3306.			
Input: a valid user id for the "performance" procedure			
Expected Results: 1	table of data	Actual Results: Procedure	not found
Post-Conditions: N/A			

Table 19: ShotRecommender Query Test

Test ID: SR3 ShotRecommender	Random Shot Test St	atus: PASS	
Description: The ShotRecommender receives	a request for a shot.		
Pass/Fail Condition: The service generates a random shot.			
Pre-Conditions: The service is running on port 8080.			
Input: an HTTP request with "Random" as the mode parameter			
Expected Results: a random shot which adheres to requirements	Actual Results: As expected		
Post-Conditions: N/A			

Table 20: ShotRecommender Random Shot Test

Test ID: SR4	${\bf Shot Recommender}$	Training Shot Test	Status: FAIL
Description: The S	hotRecommender receives	a request for a shot.

Input: an HTTP re	equest with "Train" as the	mode parameter	
Expected Results:	a random shot which ad-	Actual Results: Model no	t found
heres to requirement	nts		
Post-Conditions: N	/A		

Table 21: ShotRecommender Training Shot Test

Test ID: SR5	${\bf Shot Recommender}$	UpdateModel Test	Status: FAIL
Description: The S	hotRecommender receives	a status update for a shot.	
Pass/Fail Condition: The service changes the model in response.			
Pre-Conditions: The service is running on port 8080.			
Input: an HTTP request with the shot id and returned boolean as parameters.			
Expected Results:	the model is updated	Actual Results: Model not	found
Post-Conditions: N/A			

 ${\bf Table~22:~ShotRecommender~UpdateModel~Test}$

4.2.3 Shooting Model

Test ID: SM1	ShootingModel calcu	ulateYawAngle Test	Status: PASS
Description: The o	calculateYawAngle method	returns an accurate yaw angle	e in degrees.
Pass/Fail Condition	Pass/Fail Condition: The method returns an angle in degrees accurate to a whole number.		
Pre-Conditions: N/A			
Input: xDist, yDist; distance to desired shot's x-coordinate and y-coordinate.			
Expected Results: accurate to a whole	A yaw angle in degrees, le number.	Actual Results: As expected	
Post-Conditions: N/A			

 ${\bf Table~23:~Shooting Model~calculate Yaw Angle~Test}$

Test ID: SM2	${f Shooting Model}$ calc	culateVelocity Test	Status: PASS
Description: The calc	ulateVelocity method re	eturns an accurate velocity in	n meters/second.
Pass/Fail Condition:	Pass/Fail Condition: The method returns the velocity accurate to a whole number.		
Pre-Conditions: N/A			
Input: N/A			
Expected Results: Ve to a whole number.	locity in m/s, accurate	Actual Results: As expected	ed
Post-Conditions: N/A			

 ${\bf Table~24:~Shooting Model~calculate Veolocty~Test}$

Test ID: SM3	ShootingModel netI	HeightChecker Test	Status: PASS
Description: Ther the net.	netHeightChecker method ch	necks whether the desired s	hot will pass over
Pass/Fail Conditi pass over the net.	on: The method returns th	ne correct boolean indicatin	ng if the shot will
Pre-Conditions: N	J/A		
Input: N/A.			
_	: A boolean; True is shot net, False otherwise.	Actual Results: As expect	ted
Post-Conditions:	N/A		

 ${\bf Table~25:~Shooting Model~net Height Checker~Test}$

4.2.4 Data Storage

Test ID: DS1	Data Storage	Sign Up Test	Status: PASS
Description: Data Storage	receives user name	e and password to sign up	
Pass/Fail Condition: User table updates with correct parameters			
Pre-Conditions: The SQL database is running on port 3306.			
Input: User name and use	r password		
Expected Results: User ta	ble updated	Actual Results: As expected	d
Post-Conditions: N/A			

Table 26: Data Storage Sign Up Test

Test ID: DS2 Data Storage I	Next Shot Test	Status: PASS
Description: Data Storage returns a shot typ	e for the system to execute	
Pass/Fail Condition: a specified desired zone the system must aim for is returned		
Pre-Conditions: The SQL database is running on port 3306.		
Input: Desired zone id as an integer		
Expected Results: Return valid shot parameters, speed and angular velocity	Actual Results: As expected	
Post-Conditions: N/A		

Table 27: Data Storage Next Shot Test

Test ID: DS3	Data Storage l	Returned Test	Status: PASS
Description: Data Stora	age received paramete	rs for a successful or mis	sed shot
Pass/Fail Condition: Returnrate table updates with correct parameters			rs
Pre-Conditions: The SQL database is running on port 3306.			
Input: Timestamp, user and shot ids			
Expected Results: Retu	rnrate table updated	Actual Results: As exp	ected
Post-Conditions: N/A			

Table 28: Data Storage Returned Test

Test ID: DS4	Data Storage	Sign In Test	Status: PASS
Description: Data Stora	Description: Data Storage receives user name and password and authenticates it		
Pass/Fail Condition: Returns accurate boolean value according to matching of user name and password			hing of user name
Pre-Conditions: The SO	Pre-Conditions: The SQL database is running on port 3306.		
Input: User name and user password			
Expected Results: True password matches the they do not match		Actual Results: As expec	ted
Post-Conditions: N/A			

Table 29: Data Storage Sign In Test

Test ID: DS5	Data Storage	Statistics Test	Status: PENDING
Description: Data Storage	provides return ra	te given a time frame	
Pass/Fail Condition: Retu	Pass/Fail Condition: Returns return information given a range of time stamp inputs		
Pre-Conditions: The SQL database is running on port 3306.			
Input: Time stamp range			
Expected Results: Return inputed range	stats within the	Actual Results: N/A	\
Post-Conditions: N/A			

Table 30: Data Storage Statistics Test

4.2.5 User Interface

Test ID: UI1 User Interfa	ace Display Test	Status: PASS	
Description: All elements of UI are display	ved in a window		
Pass/Fail Condition: UI displays when program is run			
Pre-Conditions:N/A			
Input: N/A			
Expected Results: Window opens with We come Screen	el- Actual Results: As expected	ed	
Post-Conditions: Application running			

Table 31: User Interface Display Test

Test ID: UI2 User Int	erface Butt	on Test	Status: PASS
Description: All buttons should do sor	me action when	n pressed	
Pass/Fail Condition: When pressed, buttons change the state of the application and return			lication and return
Pre-Conditions: Application UI is running			
Input: N/A			
Expected Results: Return true when be is pressed	outton Actua	l Results: As expec	eted
Post-Conditions: N/A			

Table 32: User Interface Button Test

Test ID: UI3	User Interfac	ce Mode Test	Status: PASS
Description: Mode should	be assigned when	it is picked in a dropdown	
Pass/Fail Condition: Mode variable assigned selected value			
Pre-Conditions: Application UI is running			
Input: N/A			
Expected Results: Return	value selected	Actual Results: As expected	d
Post-Conditions: N/A			

Table 33: User Interface Mode Test

Test ID: UI4	User Interface	Sign up Test	Status: FAIL		
Description: When sig	Description: When signup button is pressed, user is added with given parameters				
Pass/Fail Condition: User inputs are sent to Data Storage					
Pre-Conditions: Application UI is running					
Input: User name and user password

Pass/Fail Condition: User inputs are sent to Data Storage			
Pre-Conditions: Application UI is running			
Input: User name and user password			
Expected Results: Return true if password matches user name	Actual Results: Page not implemented		
Post-Conditions: N/A			

Table 36: User Interface Log In Test

Test ID: UI6	User Interface Stat	istics Test	Status: PENDING
Description: Statistics	show on page		
Pass/Fail Condition: R	elevant page shows when st	atistics tab is pr	essed
Pre-Conditions: Applic	ation UI is running		
Input: N/A			
Expected Results: Stat	istics page displays Act	ual Results: N/A	Λ
Post-Conditions: N/A			

Table 37: User Interface Statistics Test

4.2.6 SmartServe

Test ID: SS1 ShotRecommendation	Connection Test - Pass Status: PASS			
Description: The ShotRecommendation class will call the <i>connect</i> method with port 8080 as a parameter.				
Pass/Fail Condition: The method should return true.				
Pre-Conditions: The ShotRecommendation server is running on port 8080.				
Input: 8080				
Expected Results: true	Actual Results: As expected			
Post-Conditions: N/A				

Table 38: Shot Recommendation Connection Test - Pass

Test ID: SS2	ShotRecommendation	Connection Test - Fail	Status: PASS		
Description: The as a parameter.	Description: The ShotRecommendation class will call the <i>connect</i> method with port 8090 as a parameter.				
Pass/Fail Condition: The method should return false.					
Pre-Conditions: The ShotRecommendation server is running on port 8080.					
Input: 8090					
Expected Results Post-Conditions:		Actual Results: As expected	1		

Table 39: Shot Recommendation Connection Test - Fail

Test ID: SS3 ShotRe	ecommendation Request Shot - Random Status: PASS
Description: The ShotRe Random mode as a para	commendation class will call the $getRecommendation$ method with meter.
'	The method should a random shot of the form A.BC,W=A.BC" where the values are within the requirements of
Pre-Conditions: The Sho Input: Mode.Random	otRecommendation server is running on port 8080.
Expected Results: A value form.	alid shot, in string Actual Results: As expected
Post-Conditions: N/A	

Table 40: Shot Recommendation Request Shot - Random

Test ID: SS4 ShotRecommendation Request Shot - Train Status: FAIL				
Description: The ShotRecommendation class will call the getRecommendation method with Training mode as a parameter.				
Pass/Fail Condition: The method should a shot of the form "X=A.BC,Y=A.BC,V=A.BC,W=A.BC" where the values are within the requirements of the system.				
Pre-Conditions: The ShotRecommendation server is running on port 8080. Input: Mode.Train				
Expected Results: A valid shot, in string Actual Results: Model not found form.				
Post-Conditions: N/A				

Table 41: Shot Recommendation Request Shot - Train

Test ID: SS5 ShotRecommendation Request Shot - One-shot Status: PASS				
Description: The ShotRecommendation class will call the <i>getRecommendation</i> method with One-shot mode as a parameter.				
Pass/Fail Condition: The method should a shot of the form "X=A.BC,Y=A.BC,V=A.BC,W=A.BC" where the values are within the requirements of the system. Repeated requests should return the same shot.				
Pre-Conditions: The ShotRecommendation server is running on port 8080. Input: Mode.OneShot				
Expected Results: A valid shot, in string Actual Results: As expected form.				
Post-Conditions: N/A				

Table 42: ShotRecommendation Request Shot - One-shot

Test ID: SS6	ShotRecommendat	ion Model Update	Status: FAIL	
Description: The S	Description: The ShotRecommendation class will call the <i>updateModel</i> method.			
Pass/Fail Condition: The ShotRecommender does not throw an error and the model is updated.				
Pre-Conditions: The ShotRecommendation server is running on port 8080.				
Input: a previously request shot and false				
Expected Results:	N/A	Actual Results: Model not fe	ound	
Post-Conditions: N/A				

Table 43: ShotRecommendation Model Update

Test ID: SS7	${f ShotRecommendat}$	ion Model Update	Status: FAIL
Description: The S	hotRecommendation class	will call the <i>updateModel</i> m	nethod.
Pass/Fail Condition: The ShotRecommender does not throw an error and the model is updated.			
Pre-Conditions: The ShotRecommendation server is running on port 8080.			
Input: a previously request shot and true			
Expected Results:	N/A	Actual Results: Model not	found
Post-Conditions: N	J/A		

Table 44: Shot Recommendation Request Shot - One-shot

Table 45: ComputerVisionController Connection Test - Pass

Test ID: SS9 ComputerVisionController Connection Test - Fail Status: PASS		
Description: The CV class will call the conn	ection method.	
Pass/Fail Condition: The method returns false.		
Pre-Conditions: The CV server is running on port 8001.		
Input: 8000		
Expected Results: false Actual Results: As expected		
Post-Conditions: N/A		

Table 46: ComputerVisionController Connection Test - Fail

Test ID: SS10 ComputerVisionController Detect Test - Timeout Status: PASS

Description: The CV class will call the start method and no ball is introduced into the frame.

Pass/Fail Condition: The method returns false.

Pre-Conditions: The CV server is running on port 8000.

Input: N/A

Expected Results: false Actual Results: As expected

Post-Conditions: N/A

Table 47: ComputerVisionController Detect Test - Timeout

Test ID: SS11 ComputerVisionControl	ler Detect Test - Detect Status: PASS		
Description: The CV class will call the <i>start</i> method and a ball is introduced into the frame, emulating a successful shot.			
Pass/Fail Condition: The method returns tru	ie.		
Pre-Conditions: The CV server is running on port 8000.			
Input: N/A			
Expected Results: true Actual Results: As expected			
Post-Conditions: N/A			

Table 48: ComputerVisionController Detect Test - Detect

Test ID: SS12 SQLConnector Connection Test - Pass Status: PASS

Description: The SQLConnector class will call the connect method.

Pass/Fail Condition: The method returns true.

Pre-Conditions: The SQL server is running on port 3306.

Input: 3306

Expected Results: true Actual Results: As expected

Post-Conditions: N/A

Table 49: SQLConnector Connection Test - Pass

Test ID: SS13	SQLConnector Connection Test - Fail Status: PA		Status: PASS
Description: The SC	QLConnector class will ca	ll the connect method.	
Pass/Fail Condition: The method returns false.			
Pre-Conditions: The SQL server is not running.			
Input: 3306			
Expected Results: false Actual Results: As expected			d
Post-Conditions: N/A			

Table 50: SQLConnector Connection Test - Pass

Test ID: SS14

SQLConnector Query Test - Signup

Status: PASS

Description: The SQLConnector class will call the save method.

Pass/Fail Condition: The user is saved in the database.

Pre-Conditions: The SQL server is running on port 3306.

Input: Object[] with "Chris" and "password123" for the "sign_up" procedure

Expected Results: true

Actual Results: As expected

Post-Conditions: N/A

Table 51: SQLConnector Query Test - Signup

Test ID: SS15	SQLConnector Que	ery Test - Returned	Status: PASS
Description: The SO	QLConnector class will ca	ll the save method.	
Pass/Fail Condition: The shot is saved in the database correctly.			
Pre-Conditions: The SQL server is running on port 3306.			
Input: Object[] with 25, 1, 1 and the current time for the "returned" procedure			
Expected Results: t	rue	Actual Results: As expec	ted
Post-Conditions: N	/A		

Table 52: SQLConnector Query Test - Returned

Test ID: SS16	SQLConnector Q	uery Test - Login	Status: PASS
Description: The So	QLConnector class will ca	ll the save method.	
Pass/Fail Condition: The shot is saved in the database correctly.			
Pre-Conditions: The SQL server is running on port 3306.			
Input: Object[] with "Chris" and "password123" for the "login" procedure			
Expected Results: true Actual Results: As expected			ed
Post-Conditions: N/A			

Table 53: SQLConnector Query Test - Returned

Test ID: SS17	ArduinoController Co	onnection Test - Pass	Status: PASS
Description: The	e ArduinoController class will	call the $test$ method, repeat	for all arduinos.
Pass/Fail Condit	ion: The method returns tru	ie.	
Pre-Conditions: The Arduinos are plugged in via USB and loaded with the correct code.			
Input: the port f	for the Arduino(s)		
Expected Results	s: true	Actual Results: As expecte	d
Post-Conditions:	N/A		

Table 54: Arduino Controller Connection Test - Pass

Test ID: SS18 ArduinoController Connection Test - Fail Status: PASS

Description: The ArduinoController class will call the test method, repeat for all arduinos.

Pass/Fail Condition: The method returns false.

Pre-Conditions: The Arduinos are plugged in via USB and loaded with the correct code.

Input: "some-test-string"

Expected Results: false Actual Results: As expected

Post-Conditions: N/A

Table 55: ArduinoController Connection Test - Fail

Test ID: SS19	Status: PASS		
Description: The Arc	duinoController class will call the <i>shoot</i> met	thod.	
Pass/Fail Condition: The system pans to 75 degrees.			
Pre-Conditions: The Arduinos are plugged in via USB and loaded with the correct code.			
Input: a ShotDetail object with pan of 75 degrees			
Expected Results: tr	ue Actual Results: A	As expected	
Post-Conditions: N/A			

Table 56: ArduinoController Test - Pan

Test ID: SS20	ArduinoContro	ller Test - Pan	Status: PASS
Description: The Arc	duinoController class wil	call the shoot method.	
Pass/Fail Condition:	The system pans to 120	degrees.	
Pre-Conditions: The Arduinos are plugged in via USB and loaded with the correct code			the correct code.
Input: a ShotDetail	object with pan of 120 d	egrees	
Expected Results: tr	rue	Actual Results: As expect	ted
Post-Conditions: N/	A		

Table 57: ArduinoController Test - Pan

Test ID: SS21	Status: PASS		
Description: The Arduin	noController class will ca	all the <i>shoot</i> method.	
Pass/Fail Condition: The system shoots at 75% power.			
Pre-Conditions: The Arduinos are plugged in via USB and loaded with the correct code.			e correct code.
Input: 75			
Expected Results: true	A	actual Results: As expected	
Post-Conditions: N/A			

Table 58: ArduinoController Test - Shoot

Test ID: SS22	ArduinoControl	ler Test - Shoot	Status: PASS
Description: The Arc	luinoController class wil	call the <i>shoot</i> method.	
Pass/Fail Condition:	The system shoots at 10	00% power.	
Pre-Conditions: The Arduinos are plugged in via USB and loaded with the correct code			ne correct code.
Input: 100			
Expected Results: tr	ue	Actual Results: As expected	ed
Post-Conditions: N/A	A		

Table 59: ArduinoController Test - Shoot

4.3 Hardware Integration Testing

4.3.1 Shooting Testing

Test ID: HI1 Shooting Test - Shot 1		Status: ???	
Description: The system can fetch a shot v	Description: The system can fetch a shot with ID: 48 and shoot it		
Pass/Fail Condition: N/A			
Pre-Conditions: The system is in the home position.			
Input: one-shot mode set at ID 48.			
Expected Results: The shot hits zone 17, Actual Results: ??? with a pitch of 30 and roll angle of 0.			
Post-Conditions: N/A			

Table 60: Shooting Test - Shot 1

Test ID: HI2 Shooting Test - Shot 2		Status: ???	
Description: The sys	tem can fetch a shot wit	h ID: 91 and shoot it	
Pass/Fail Condition:	N/A		
Pre-Conditions: The system is in the home position.			
Input: one-shot mode set at ID 91.			
Expected Results: 7 with a pitch of 10 an	The shot hits zone 12, d roll angle of 90.	Actual Results: ???	
Post-Conditions: N/A	A		

Table 61: Shooting Test - Shot 2

Test ID: HI3 Shooting Test - Consecutive Shots Status:											
Description: The system can shoot two shots consecutively with IDs 148 and 193.											
Pass/Fail Condition: N/A											
Pre-Conditions: The system is in the home position.											
Input: one-shot mode set at ID 148 and then 193.											
Expected Results: The shot hits zone 5, with a pitch of 10 and roll angle of 180, which is followed by another shot that hits zone 2 with a pitch of 0 and roll angle of 270.	Actual Results: ???										
Post-Conditions: N/A											

Table 62: Shooting Test - Consecutive Shots

Test ID: HI4 Sh	Shooting Test - Repeatability										
Description: The system can shoot three shots consecutively with IDs 148, 193 and 148.											
Pass/Fail Condition: The same zone is hit for the first and third shot, at the same pitch and roll angles.											
Pre-Conditions: The system is in the home position.											
Input: one-shot mode set at I	Input: one-shot mode set at ID 148, 193 and then 148.										
Expected Results: the first a should be identical	and third shot	Actual Results: ???									
Post-Conditions: N/A
